

Solutions for welding and cladding applications

Unlimited competences

The Polysoude sales and service team is well known for their major qualities in terms of customer proximity and commitment. They are present all over the world in metalworking industries. This is also true for Spain, where the demand for sales and services in the field of welding and cladding is continuously increasing.

In these industries, professional advice and application provided by welding specialists are indispensable. Making the right choice of welding or cladding equipment including commissioning and related services, as well as retrofitting of existing installations: in-depth knowledge of the equipment and welding procedures are what distinguishes the Polysoude sales and service team.

Competent advice and customer proximity

Emphasis is given on technical knowledge, geographical proximity, as well as an open ear concerning the customers' requests. A large panel of standard products as well as customer made solutions can be defined and realised. A large range of industries can benefit from this offer: small, middle-sized or large companies working as manufacturer or end user of installations in various fields, such as food and beverage, pharmaceutical and process industries and much more. Polysoude's know-how and experience are recognised in the field of orbital TIG welding, automated welding as well as TIG cladding and plasma welding.

Polysoude Iberia

In Spain and Portugal, Polysoude's specialist is Luis Alfredo de Andrés. For over 25 years he worked for Polysoude's partner Praxair as dedicated Polysoude product manager. Since early 2013 the

expansion of the Polysoude sales network made Luis Alfredo de Andrés works directly for Polysoude, located in Madrid. Luis Alfredo de Andrés benefits from the technical and commercial support via the Polysoude Headquarters located in Nantes, France, where the multilingual staff provides advice and service for standard or custom designed solutions.
