**BAE SYSTEMS**

Dear Sir,

Since 1998, BAE have utilised welding equipment supplied by Polysoude SA.

To date, BAE Systems have utilised Polysoude Polycar 60 welding tools with both 600PC and 350PC power sources for the welding of over 650 pipe joints, achieving the highest levels of weld quality, repeatedly satisfying NDE requirements.

Also see recently published article in the Welding & Cutting journal **about our experience in using Polysoude equipment for welding of large bore primary circuit tubing.**

The equipment continues to prove its adaptability, robust nature and reliability in challenging manufacturing environments.

**Principal Welding Engineer  
BAE Systems**
