Dear Mr. Gutorov,

We would like to inform you about a good operation of the installation for welding of fuel tanks of POLYSOUDE. This installation would be supplied to NPO S.A. Lavochkina in the year of 2000 and would be retrofitted in the year 2011.

90% of products welded with this installation are AC welds of aluminum alloys, mainly of alloy AMg6 with thickness 2 and 3 mm.

We think, it is necessary to note, that the welds of our important constructions, which have high operational requirements of strength and tightness, have practically no defects.

Mr. Klimushin

Chief Engineer
