

## “Polysoude equipment is made for welders, by welders”

Since April 2013, Southern Heat Exchanger (Tuscaloosa, USA) has been using Polysoude equipment such as PS 406-2 and P6 power sources, TS 2000 and TS 8/75 welding heads and Polyfil-3 wire feeder. Joey Foster, welding engineer at Southern Heat Exchanger gave the following testimonial via YouTube:

24 September 2013,

The type of quality and support I have received from Polysoude just shows what type of company they are. I have never been disappointed. Great job and keep up the good work!!!!

8 November 2013,

Polysoude equipment is by far the most inovative and versatile equipment on the market today. I have used various different manufactures of orbital equipment and have been disappointed by both the quality of the equipment and most importantly the type of support offered by the other competitors. The equipment is very easy to set up and use. Polysoude has experienced experts on staff ready to respond to both general and technical questions. My company started using Polysoude six months ago and we plan on purchasing additional pieces at the start of 2014. If your company is looking to increase quality and productivity, all while eliminating rework, Polysoude and their expert staff is fully committed to ensure you and your company are pleased and receiving the results you strive for. I would like to say "POLYSOUDE EQUIPMENT IS MADE FOR WELDERS, BY WELDERS". Polysoude is an extension of our companies family and I would consider them part of my team and a detrimental part of my companies continuous success.
