Dear Mr Linker,

We have purchased in September 2021 a GTAW automated welding equipment composed of the following items :

- P4 Smart Welding Station
- MW65 Closed Welding Head

We have been using a P3 Smart Welding Station uncooled combined with an MW65 Welding head since the beginning of this year, and have welded a lot of weld joints without any problems on board vessels.

We are satisfied with the lightweight and the small size of the equipment and the weld quality in accordance with the requested standards.

With best regards

CARRIOU Thomas
